

# GENERATOR MAINTENANCE

## Visual Inspection

NETR will perform a comprehensive visual examination of your entire generator system, encompassing scrutiny of belts, hoses, the starting battery, engine fan, and motor components.

## Oil Change/ Oil Filter Change

Execute an oil change procedure, incorporating the installation of fresh Full Synthetic Engine oil along with the replacement of the oil filter.

## Replace Air Filter

Substitute the existing air filter with an authentic Generac generator air filter to optimize performance and ensure optimal filtration.

## Change Out Spark Plugs

Replace the spark plugs to enhance ignition efficiency and uphold the overall operational reliability.

## Full Load Test + Start Up

Execution of a full load test and startup assessment to ensure optimal functionality under operational conditions.
